

TAKE OFF DISTANCE (IN FEET)

CONDITIONS:

Zero Wind
Paved, Level, Dry Runway
Full Throttle Prior to Brake Release
Flaps Up

NOTES:

1. Maximum performance technique as specified.
2. Prior to takeoff from fields above 5000 feet elevation, the mixture should be leaned to give maximum RPM in a full throttle, static runup.
3. Decrease distances 10% for each 9 knots headwind. For operation with tailwinds up to 10 knots, increase distances by 10% for each 2 knots.
4. Where distance value has been deleted, climb performance after lift-off is less than 150 fpm at takeoff speed.
5. For operation on a dry, grass runway, increase distances by 15% of the "ground roll" figure.

STARTDISTANCE (I FOD)

Forudsætninger:

Ingen vind
Asfalteret, vandret og tørt underlag
Fuld gas før bremsen løses
Flaps indfældet

Noter:

1. Maksimal ydelses teknik som specificeret.
2. Før start fra baner over 5000 fods højde, skal blandingshåndtag magres så maksimale omdrejninger opnås ved fuld gas under statisk opvarmning.
3. Afkort distancer med 10% for hver 9 knob modvind. Ved operation i medvind op til 10 knob, forøg distancer med 10% for hver knob.
4. Hvor distance værdier er slettet af tabellen, vil stigeevne efter rotation være mindre end 150 FPM ved start hastigheden.
5. Ved operation på tør græsbane, forøg distancer med 15% af startløbsværdien.
